Scope Systems

Corporate Overview

Scope Systems delivers fully tailored management solutions for the mining and mining services sector

Established in 1994, Scope Systems is a market leader in the provision of Enterprise Resource Planning (ERP) solutions for the mining and mining services industries.

From our global headquarters in Perth, Western Australia, supported by our regional offices, we tailor customised solutions to help managers control their resource focused businesses from grassroots explorers to multi-million dollar operations.

Scope Systems' integrated solution provides our clients the tools they need to control, manage and report on the day-to-day running of their businesses. The result is increased efficiency, reduced costs and more time for our clients to concentrate on the growth of their organisation.

Capabilities

Using the comprehensive PRONTO-Xi software as a foundation layer, Scope Systems has developed a number of enhancements and additional modules to provide an ERP package that is tailored to the unique requirements of mining, drilling and contract mining companies. Each solution serves the specific needs of companies within these industries – allowing clients to manage all aspects of their operations from production to the boardroom. With the added capabilities of our Business Intelligence reporting software powered by QlikView, and our highly knowledgeable Support Department, Scope Systems provide a fully integrated solution that is unparalleled in the market.

Financials

Take control of your finance, payroll and accounting management with our comprehensive Financials Suite that includes General Ledger, Payroll, Accounts Payable, Accounts Receivable and Fixed Assets.

Project (Job) Costing

Track costs and expenses associated with bringing your projects and jobs online, while automating tedious areas of project management right from the initial quotation through to the project's completion.

Plant (Asset) Maintenance

Reduce your maintenance costs by effectively scheduling your planned and unplanned asset maintenance activities, plant downtime and equipment repair costs.

Inventory

Optimise your purchasing processes and increase your visibility of warehouse stock levels, including ensuring critical spares are readily available and replacement stock is only ordered when necessary.

Customer Relationship Management

Manage new and existing client relationships to conduct professional marketing campaigns and increase sales and profitability per customer.

Manufacturing

Improve flexibility throughout the manufacturing process by optimising shopfloor, quality control, planning and work-order processes.

Tenement Control

Track expenditure, anniversary dates and annual commitments across your tenements and produce accurate reports such as Western Australia's Form 5 reports.

Physical Data Management

Improve the integrity of your non-financial information, reduce the volume of uncontrolled spreadsheets within your business, while quickly and easily comparing non-financial and financial data for improved understanding of your organisation's performance.

Business Intelligence Reporting

Drive further into the data with Scope Systems' easy to use, graphical Business Intelligence reports and gain a true understanding of how your company is performing.

HP Lease

Optimise your Hire Purchase leasing arrangements to save money by automating monthly reconciliation processes, bulk postings and supplier payments.

Services

Scope Systems' team work closely with each of our clients to ensure their solution meets their exact needs, from the software's initial implementation and associated training through to providing high levels of ongoing support and assistance.

Implementation

The initial implementation of your solution, as well as any extra functionality you decide to add later, will be led by a consultant with a deep understanding of Scope Systems' software and your unique industry needs.

Support

Your complete Scope Systems' solution is supported by a well trained, knowledgeable and internationally mobile Support Team.

Project Management

Our Project Management service, based on the widely recognised PMBOK methodology, works with you to ensure your complete software package is delivered on time, on budget and to your expectations.

Tailoring

Scope Systems team of consultants and developers ensures your solution performs in a way that you want it to and reflects your business processes exactly.

Training

Whether at our offices or on your site, our training programs are designed to give you the confidence to make the most out of your software from Scope Systems.

Hardware

We can supply, configure and install the most appropriate hardware to ensure your Scope Systems solution operates at peak performance.

Disaster Recovery

Ensure your data and information is always backed up with our dedicated Disaster Recovery service.

Accessibility

As an integrated provider of ERP solutions, Scope Systems offers our clients two different methods through which they can access their ERP solution.

Stand Alone

The Stand Alone system gives you outright access to the software and it is installed on your own hardware. This option offers you the benefit of being able to choose where you locate your hardware, which can be advantageous when you are operating in remote locations with limited communications.

Cloud Computing

Scope Systems can also deliver your ERP solution to you via the Software as a Service (SaaS) model. Simply stated, this means we develop, install, host, manage and support your solution from our secure data centre, and then give you subscription-based access through the internet or a Virtual Private Network (VPN). This outsourcing arrangement eliminates the need for you to have in-house technical capabilities, hardware and staff, while giving you access to an industry leading ERP solution for a modest monthly cost.

Regardless of how you decide to access your solution, Scope Systems' deployment model is designed to be flexible and scalable, meaning you can grow into the system as your company grows and in the meantime, you can focus on your core business without worrying about business processes.

Clients

More than 160 companies are already using Scope Systems' products and services.

Scope Systems has a large and diversified client base with customers located throughout Australia, Africa, Asia and South America. Many of our clients have been with us from the start, highlighting our capabilities, as well as the flexibility of Scope Systems solutions, to support a company from its initial beginnings to a point where they undertake large scale operations and high level production output.
